

KENOTEQ

K-BRIQ - High Quality Recycled Facing Brick

K-BRIQ is sustainable:

- Over 90% recycled content – reduced landfill from construction and demolition
- Low energy in production, low carbon footprint – no kiln firing
- No cement
- No need for painting or surface treatment
- Fully recyclable as inert construction waste at end of life

Key benefits:

- Suitable for most traditional brick and block applications
- Range of colours available
- Similar appearance to traditional brick
- Low energy in occupation – Thermal mass and humidity buffering
- Sustainable – the highest recycled content of any construction material on the market coupled with low energy production and recyclability

Commercial opportunity

The K-BRIQ is entering the commercialisation stages of development and views are currently being sought from building owners and specifiers, as well as demo projects as critical part of the product development program (under NDA)
